

Standard CM

Built to OEM standards and made from Vasco-Wear type material, it is vacuum hardened, triple tempered and deep cryogenically treated.

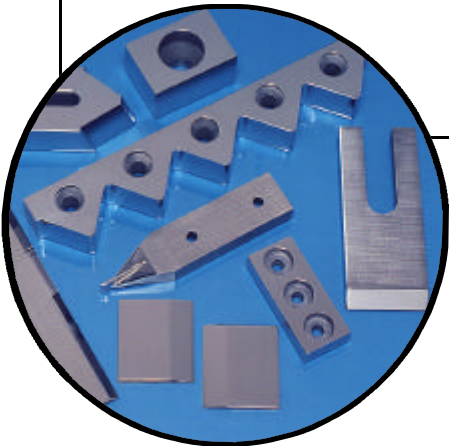

Piranha (Our own patented design)

Includes all of the features of the standard CM Blade with the addition of our patented, serrated Surface. This surface prevents tire slippage at the knife half life, which is a common problem with the standard design. The Piranha continues to grab and pull, maintaining your throughput for the entire life of the knife.

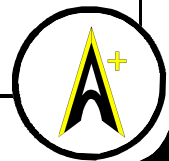

Columbus McKinnon Knives and Wear Plates

Featuring the "Piranha"

Wear Plates

Most wear resistant CM liner on the market. We've improved CM's original specifications by upgrading to D2 tool steel. Every wear plate is vacuum hardened and triple tempered. Deep cryogenics and titanium carbide coatings also available.

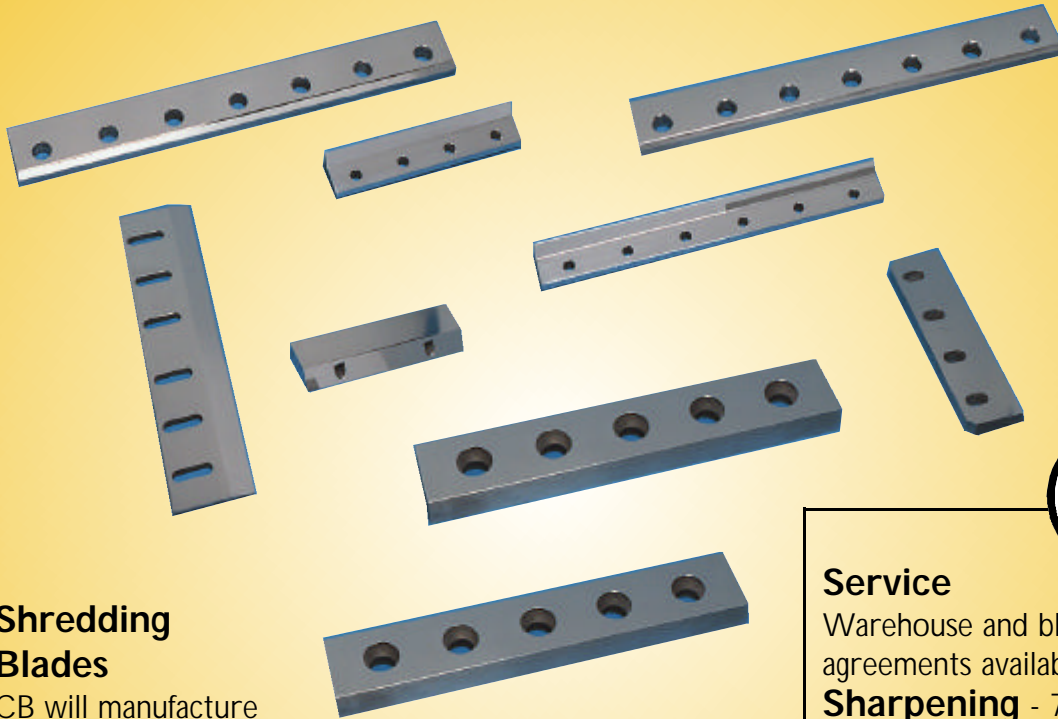

All CM blades feature our exclusive 2 for 1 guarantee.

Call sales representative for specific terms and limitations

Control

Our on site commercial heat treating facility (ISO 9002, QS 9000, and AS 9000 Certified) guarantees your knives will be processed properly. This is the most important operation in making high performance knives and wear parts for severe applications such as tire recycling.

Shredding Blades

CB will manufacture most brands to meet your specific needs. Let CB help resolve your breakage and chipping problems. Custom designs easily accommodated

Granulating and Powderizing

We carry more than a million dollars worth of these knives, made from a wide variety of material including bonded tool steels and tungsten carbide.

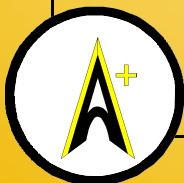

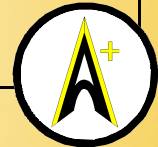

Service

Warehouse and blanket agreements available.

Sharpening - 72 hour turn around.
Engineering support available on or off site.

Plant tours

We welcome all visitors to our state of the art manufacturing facility.
